---

esponding to the needs of industry since 1973

## *Did you know?*

In one year, the water treatment industry.....

- Ships 38,000,000 lbs. of dangerous, corrosive Sodium Hydroxide (lye) over US highways...much of it used solely for liquid formulation stability and solubility
- Uses 165,000,000 gallons of production water
- Uses 225,000,000 gallons of rinse water to clean used drums before disposal or return
- **This amount of water is enough to supply an area the size of St. Louis for one day**
- Consumes 5,700,000 gallons of oil(energy consumption) to produce the Sodium Hydroxide used
- Consumes 12,500,000 gallons of fuel oil to ship liquid product
- Consumes 2,520,000 gallons of crude oil to manufacture the plastic drums
- **Eliminating this excessive use of energy is equivalent to removing 52,000 autos per year from our roadways.**

**WHEN YOU USE OUR SOLID PRODUCTS, YOU WILL ACTUALLY BE DOING SOMETHING TO STOP THIS WASTE!**
